## Understanding Resistance Projection Welding

Resistance projection welding (RPW) is a form of resistance welding where the welding current is concentrated on small projections or nubs on one of the workpieces. These projections serve as localized points of contact, enabling rapid heating and melting at specific spots to form a strong weld.

## Basics of Resistance Welding

Resistance welding relies on electrical resistance to generate heat at the interface of two metal parts. When an electric current passes through the electrode and workpiece, the resistance causes localized heating, resulting in a weld when the parts are pressed together under pressure.
