This article aims to explore the core aspects of applied laser medicine, emphasizing its principles, diverse applications, technological advancements, safety considerations, and future prospects.

Understanding the Fundamentals of Laser Medicine

What is Laser Medicine?

Laser medicine involves the use of laser (light amplification by stimulated emission of radiation) technology to diagnose, treat, and manage various medical conditions. Lasers produce highly coherent, monochromatic, and collimated light that can be precisely focused on targeted tissues, enabling minimally invasive procedures with high accuracy.

Principles of Laser-Tissue Interaction

The effectiveness of laser treatments depends on how laser light interacts with biological tissues. These interactions are primarily governed by:

- **Absorption:** The process where tissue components absorb laser energy, leading to heating or photochemical reactions.
- **Scattering:** Redirection of laser light within tissues, affecting depth and precision.
- **Reflection and Transmission:** Portions of laser energy are reflected or transmitted through tissues, influencing treatment boundaries.

The choice of laser wavelength determines which tissue chromophores (e.g., hemoglobin, melanin, water) predominantly absorb the laser energy, thereby affecting treatment outcomes.

Types of Lasers Used in Medicine

Different laser types are employed depending on the clinical application, each characterized by their specific wavelength and tissue interaction profile. Commonly used lasers include:

- **CO₂ Laser:** Emits at 10,600 nm; highly absorbed by water; used in dermatology and ENT.
- **Nd:YAG Laser:** Emits at 1064 nm; penetrates deeper; used in vascular and urological procedures.
- **Pulsed Dye Laser (PDL):** Emits around 585-595 nm; targets hemoglobin; used in vascular lesions.
- **Er:YAG Laser:** Emits at 2940 nm; precise ablation of hard and soft tissues; used in dentistry and dermatology.
- **Diode Lasers:** Range from 800-980 nm; versatile and portable; used in soft tissue surgeries.
