Key External Features of a Frog

Frog external anatomy consists of several prominent features, each with specific functions and characteristics. The primary features include the head, limbs, skin, and sensory organs.

1. Head and Facial Features

The head of a frog houses vital sensory organs and the mouth. Key external features include:

- Nostrils (Nares):

- Located at the tip of the snout, the nostrils are small openings used for respiration and scent detection.
- In the answer key, they are typically labeled as two small openings near the top of the snout.

- Mouth (Oral Cavity):
- The wide opening at the front of the face, allowing for feeding and respiration.
- The external margin of the mouth is called the labial commissure.

- Vomerine Teeth:
- Small, conical teeth located inside the mouth on the roof of the oral cavity (not visible externally but important in internal anatomy).
- For external identification, note the location of the vomerine teeth as a reference point.

- Eyes:
- Prominent, large, and positioned on the top of the head, providing excellent vision.
- In the answer key, eyes are often labeled and identified as orbital window or eye socket.

- Eyelids and Nictitating Membrane:
- The external eyelid protects the eye, while the nictitating membrane offers additional protection and is transparent.
- On external observation, the eyelids can be gently lifted to observe the membrane.

- Loreal Region:
- The area between the eye and the nostril, important for identification.

- Tongue:
- Usually visible at the mouth opening, it is sticky and used for capturing prey.
- While not external, its position is important in understanding feeding behavior.

2. Skin

Frog skin is a vital external feature, serving multiple functions:

- Texture and Color:

- Typically smooth or slightly warty, with colors ranging from green to brown, aiding in camouflage.
- The answer key may indicate areas with darker spots or patterns.

- Mucous Glands:
- Present throughout the skin, secreting mucus to keep the skin moist and aid respiration.

- Color Variations:
- Some frogs exhibit color changes for camouflage or communication.

- Skin Flaps and Warts:
- Certain areas may have warty bumps or skin flaps, which can be species-specific.

- Special Structures:
- Tympanic Membrane (Eardrum):
- Located just behind the eye, it appears as a circular, translucent disc.
- Vital for hearing, and often labeled in dissection answer keys.

3. Limbs and Appendages

Frogs possess four limbs, adapted for jumping and swimming:

- Forelimbs (Front Legs):
- Shorter and used primarily for support and movement on land.
- Composed of the brachium (upper arm), antebrachium (forearm), and manus (hand).
